

Aman Irshad

AI Engineer | LLM Systems • AI Agents • Cloud Platform • SRE

amanirshad289@gmail.com • +91-9204193665 • Bengaluru, India

SUMMARY

AI Engineer with 4+ years of experience building production grade AI systems, cloud native platforms, and autonomous infrastructure automation. Specialized in designing LLM powered AI agents that aggregate logs, metrics, traces, and deployment context to perform root cause analysis, generate remediation plans, and autonomously resolve production incidents. Experienced in deploying AI workloads on Kubernetes, integrating Claude (Anthropic) into enterprise platforms, and building scalable cloud infrastructure across Azure, AWS, and GCP. Strong foundation in DevOps, observability, platform engineering, and modern AI application development.

SKILLS

- **AI & LLM Engineering:** Claude (Anthropic), AI Agents, Agentic Workflows, Prompt Engineering, Context Engineering, Tool Calling, LLM Integration, Autonomous AI Systems, AI Safety & Guardrails, RCA Generation
- **Cloud & Platform:** Kubernetes, Helm, Azure AKS, AWS EKS, GCP GKE, ArgoCD, GitOps, Istio, OPA/Gatekeeper
- **Observability:** Prometheus, Grafana, Jaeger, Elasticsearch, Kibana, OTEL Collector, EFK Stack, ElastAlert, Datadog
- **Infrastructure:** Terraform, Ansible, GitHub Actions, Azure DevOps, IaC, Blue-Green Deployments
- **Programming:** Go, Python, Java, Bash, SQL, Linux

EXPERIENCE

Cloud Platform Engineer (Platform & SRE) • Tech Mahindra (2025-09 – Present)

- Designed and built a production grade autonomous AI agent using Go and Claude (Anthropic) that ingests Prometheus metrics, Grafana dashboards, Jaeger traces, Elasticsearch logs, Helm deployment state, and Kubernetes metadata to reason over production failures and execute remediation workflows.
- Developed an agentic workflow enabling the AI system to retrieve telemetry, synthesize context, generate root cause analysis, evaluate remediation strategies, and safely execute approved recovery actions within operational guardrails.
- Built a context engineering pipeline that aggregates structured and unstructured operational data into optimized prompts, allowing Claude to generate incident summaries, RCA reports, deployment insights, and remediation recommendations.
- Resolved 40–60% of production incidents autonomously, reducing response time from 10–15 minutes to under 5 minutes while saving 10–20 engineering hours per week.

- Implemented AI safety guardrails including execution validation, approval gates, rollback policies, confidence thresholds, and rate limiting for reliable autonomous decision making.
- Deployed Renovate and Copacetic to automate dependency updates and CVE remediation across platform services, reducing remediation cycles from weeks to days.
- Engineered zero downtime Kubernetes upgrades using Helm lifecycle hooks, automated rollback, and health validation.
- Developed custom Kubernetes controllers in Go to aggregate observability data and generate automated diagnostic bundles.
- Implemented zero trust security using OPA/Gatekeeper and Istio while leading production incident response and RCA.

DevOps Engineer • PricewaterhouseCoopers (PwC) (2022-08 – 2025-09)

- Designed CI/CD platforms with blue-green deployments supporting 100+ microservices across Azure, AWS, and GCP Kubernetes environments.
- Reduced cloud infrastructure costs by 65% through Azure Container Apps migration and dynamic build agent scaling.
- Built a developer self service platform serving 400+ engineers and enabling AI ready operational workflows.
- Created 25+ reusable Terraform modules for standardized infrastructure provisioning.
- Automated PostgreSQL provisioning, secrets management, and multi region disaster recovery.
- Optimized application performance across 70–80 microservices, reducing startup times by up to 40%.

PROJECTS

Azure Private 5G Core (Microsoft)

Built AI enabled observability platform components using Go, Grafana Operator, custom Kubernetes controllers, and telemetry aggregation to support autonomous diagnostics. Engineered Helm based ISSU with canary validation and developed a pyATS automation framework.

Cloud Data Accelerator

Implemented Delta Lake medallion architecture with SCD Type 2 while ensuring SOC2 and GDPR compliance. Managed approximately 5 TB/month of enterprise data pipelines.

Cloud Intelligence Platform

Designed cloud native platform automation supporting scalable deployment pipelines, reusable infrastructure modules, and AI ready operational workflows across Azure, AWS, and GCP.

EDUCATION

B.Tech in Computer Science & Engineering • CV Raman Global University (2018–2022)

CGPA: 9.2/10

ACHIEVEMENTS

- AI Enabled Virtual Campus Exploration — Indian Patent (IN 202531060664 A)
- Silver Medal, India Skills Competition (Cloud Computing)
- High Performer Award, PwC (2023)
- Pat on Back Award, Tech Mahindra (2025)
- Grand Finalist, Smart India Hackathon (SIH 2022)
